

MICHIGAN PROPELLERS

MACHINED-PITCH

OUTBOARD CATALOG 1964

MICHIGAN

WHEEL COMPANY

World's largest manufacturers
of propellers

Back of every Michigan wheel is over 50 years of know-how . . . plus, the world's largest, most modern propeller manufacturing plant.

All Michigan Wheels are built
with precision accuracy

Blades are identical in size, pitch and contour. Spacing and balance are exact. Michigan's exclusive MACHINED-PITCH manufacturing process GUARANTEES PERFECT ACCURACY.

Helical Planer, a Michigan exclusive, eliminates human error . . . carves Michigan Prop patterns and Pitch Blocks with unflinching accuracy.

Pitch Blocks with true screw surfaces are used to check the accuracy of each propeller throughout the manufacturing process.

MICHIGAN'S TESTING LABORATORY ON THE GRAND RIVER—GRAND RAPIDS, MICHIGAN.

Michigan Wheel Company maintains this waterway testing laboratory on the Grand River, near the factory. It is equipped with every worthwhile performance-testing device, a large fleet of test boats and practically all current makes of outboard motors. Experienced engineers run an average of 150 miles a day testing new propellers and matching each outboard motor with the prop which gives maximum

efficiency in all phases of operation. Several propellers are tested on each specific boat-engine-use set-up. Only after maximum performance has been obtained, will the recommendation be put in the Michigan Outboard Catalog. The propeller that is virtually custom-built for your rig is shown in the Propeller Selector and Price List beginning on page 6.

All are built of superior metals

For super strength and ready repairability, all Michigan wheels are cast of virgin metals formulated by world-renowned metallurgists.

Bronze... guaranteed for life

MICHALLOY-K Bronze is so strong that propellers of this metal are guaranteed for life against blade breakage at the hub. Tensile strength: 72,000 lbs. P.S.I. minimum; Yield: 35,000 lbs. minimum; Elongation: 27%. Over 1 million bronze outboard propellers for gear shift motors sold in recent years. Distinct advantage of great strength, and repairability will get you home—a safety factor.

Michalum

A Michigan exclusive. New, heat-treated aluminum. Tensile strength: 38,000 lbs. P.S.I.; yield strength: 30,000 lbs. P.S.I.; elongation 7%, salt water resistant. MICHALUM is far superior . . . the only aluminum that gives satisfaction in the severe service of large, hi-powered motors.

Magnified cross-sectional photo of a typical die-cast propeller. Note the porosity of the metal.

Magnified cross-section of a Michigan aluminum alloy prop. Note far greater density of the metal.

The RIGHT Propeller is the most critical single factor in Achieving Better Performance.

IT SHOULD BE CUSTOM MATCHED TO YOUR ENGINE, BOAT AND PURPOSE. For top performance, diameter, pitch and design must be expertly coordinated with the size, type and weight of boat, the load, the power and other characteristics of your engine, and the use.

By referring to pages 6-19 you'll find, listed under your engine, the wheel that fits your outfit and the results you wish to achieve.

The effect of changing to the RIGHT prop is illustrated by the picture opposite. Two identical boats with identical engines are finishing a 1/2-mile race . . . the only difference in the two outfits is in the propellers.

IN WATER SKIING the propeller makes all the difference. A skier when underway has about the same load effect as a passenger. On the pick-up, take-off, or when "up" on a sharp turn, the load is much greater. For easier pick-up, maintenance of speed and pull-out on turns, the special ski-load

wheels shown on recommendation charts are invaluable. For two or more skiers, select a pitch 1" lower than the wheel recommended.

IT SHOULD PERMIT ENGINE TO TURN AT PROPER RATED RPM. The engine should be operated at the RPM range specified by the manufacturer to develop maximum HP and efficiency. Recommendations in this catalog have been tested for the specified boat-engine-and-use indicated to provide the proper operational RPM range. This is very important since excessive RPM can cause damage, as can an overloaded engine.

IT SHOULD BE STRONG AND READILY REPAIRABLE. Our bronze propellers are guaranteed for life, and our aluminum props are far stronger and more ductile than any other on the market. They are hi-density sand castings with high elongation to practically eliminate blade throwing. They are easily welded and can usually be repaired at a fraction of new propeller cost. Die-cast propellers, including most aluminum propellers other than Michigan, because of porosity, are apt to break under impact and are difficult to weld. Damage is usually considerably more extensive and more costly. A bent die-cast wheel almost invariably breaks in straightening.

COMPARATIVE TEST SHOWS ADVANTAGE OF CORRECT PROP RECOMMENDATION

Michigan repair service covers America.

In addition to the factory, there are 45 Michigan Repair Service Stations, manned by factory trained men, strategically located throughout America. See back cover for listing of Service Stations.

Michigan economy replacement propellers.

For maximum economy in replacing an aluminum propeller of virtually the same characteristics as the ORIGINAL EQUIPMENT PROPELLERS of most motors, see pages 22 and 23.

MICHIGAN

MACHINED-PITCH

PROPELLERS

Here are the various basic types of Michigan propellers . . . each specifically developed to achieve maximum performance in given applications.

CUPPED OUTBOARD — ADAPTATION OF THE CUPPED EDGE PRINCIPLE THAT TOOK THE FAST BOTTOM INBOARD FIELD BY STORM. Great improvement in operating performance . . . remarkable increases in speed, especially with the 2-blade models.

FEATHERWEIGHT—NOW, THE ADVANTAGES OF BRONZE CONSTRUCTION, IN A WHEEL DESIGNED FOR LIGHTNESS. New design with smaller hub and modified blade shape. Features “top” performance, great strength, and easy reparability.

PROP-RIDER—NEW RACING WHEEL FOR SERVICE OUTBOARDS—A tough, Bronze prop specifically designed to operate close to the water’s surface without excessive slippage or cavitation. For fast bottom outboards with motor mounted as much as 2” higher on the transom to increase speed from ¾ to 2 MPH. Ordinary props run this way may lose speed due to slippage or excess r.p.m.

AQUA-JET—TREMENDOUSLY SUCCESSFUL 2-BLADE PROPELLER FOR STOCK BOAT RACING, AND ON LIGHT, FAST RUNABOUTS —Designed to produce higher speeds in racing craft or high speed runabouts with light loads. The style is identified by the prefix AJ or AJC.

SMC—NEW DEVELOPMENT 3-BLADE PROPELLER FOR TOP PERFORMANCE — Developed from the famous Michigan inboard DYNA-JET. In trial after trial their performance is consistently superior. Usually identified by prefix SMC.

AQUA-MASTER — IDEAL 3-BLADE PROPELLER FOR THE AVERAGE FAMILY BOAT—TO CARRY LOADS—TO PULL WATER SKIERS—Favorites of boat enthusiasts for over ten years. For motors of five HP and larger . . . give higher speed, quicker acceleration, better load carrying. Style usually identified by prefix AM or AMC.

FOUR-BLADE — FOR HEAVY DUTY INSTALLATIONS, OUTBOARD CRUISERS, WORK BOATS —Additional blade area in limited diameter, to improve thrust, maneuverability, starting, stopping.

CUSHION HUB—A PROTECTION FEATURE ON PROPELLERS USED WITH MOST GEAR SHIFT MOTORS—Michigan propellers for gear shift motors have cushion hub shock absorbers if original equipment had this feature. Michigan works closely with outboard engine makers matching original equipment with unbreakable cushion hubs. Cushion hubs for late models incorporate slip clutch feature.

ECONOMY—For a simple replacement of your original prop, this line (see pages 22 & 23) offers maximum economy.

Racing
Propellers

See page 21

7 POINTS

TO CHECK FOR IMPROVED OUTBOARD PERFORMANCE

✓ **1. TRANSOM HEIGHT**—For best performance, cavitation plate should be 1" below the bottom of your boat, or bottom of the keel if you have one. If it is lower you will experience back pressure, excess drag, added vulnerability to underwater obstructions. If it is higher, cavitation may be pronounced.

TOO HIGH TOO LOW CORRECT

✓ **2. CAVITATION**—Cavitation is a condition where the motor runs wild because the prop is sucking air or exhaust gases. One cause can be a bent prop, which should be repaired immediately. If boat cavitates on turns, it is lifting too high . . . correct by lowering transom so prop can't break water. A too deep keel, extra keels, metal rivets, dents, foreign matter or some self-bailers can cause cavitation . . . correct by removing the projection, cutting down or tapering keel, etc.

SELF BAILER ADDITIONAL KEELS DEEP KEEL ON TURNS METAL RIVETS, DENTS and FOREIGN MATTER

✓ **3. MOTOR TILT**—Correct tilt angle is generally with motor perpendicular to water when running full speed. Tilted too far aft, boat will gallop and prop will cavitate. Too far forward, bow will dip, cutting speed.

✓ **4. BOAT TRIM**—Proper motor tilt plus correct weight distribution make a boat "trim" . . . it planes correctly for maximum speed and maneuverability, and leaves a flat wake. Distribute stowage weight and passengers, and set motor tilt when loaded, to achieve proper trim.

✓ **5. BOAT BOTTOMS**—Distorted boat bottom, either a "hook" or "rocker" caused by high motor power, improper storage or poor support on a trailer, can reduce speed, cause galloping and hinder steering . . . check with a straight edge; if you find distortion, correct with extra ribs, stringers or other supports. Improper keel can cause serious cavitation . . . keel should be faired from an eighth to a quarter inch at transom on a taper to about 30" forward.

✓ **6. TORQUE VS. STEERING**—Many late model motors are equipped with lower unit features to compensate for torque. A properly set up steering mechanism will eliminate 90% of torque steering problems. Right-hand propellers should have steering on the right side of the boat, as the boat tends to lift on the right and will lift to the left if steering is there. Conversely, left-hand propellers should have steering on the left. Check for adequate size rope pulley, sufficient number of pulleys properly swiveled and proper cable tension. Should all these fail and the situation is still annoying, tilting the motor slightly on the transom may help.

PROPELLER TORQUE

Left Hand Right Hand
PROPELLER TORQUE

✓ **7. CUSTOM MATCH PROPELLER**—The proper propeller selector from following pages will give maximum improvement in performance. Many times 3 mph may be gained over average all-purpose propeller. In addition, the engine is permitted to turn at its recommended rpm for long trouble-free life.

MICHIGAN

PROPELLER SELECTOR AND PRICE LIST

Here is the way to find the one Michigan prop that fits your specific boat and motor, and the use to which you put your outfit. Motor makes are listed alphabetically. Under the correct make, locate the year and model of your motor. To the right you'll find one or more expert recommendations for various boat and purpose combinations . . . select and order the one closest to the characteristics of your outfit. Often identical units are shown in aluminum or bronze . . . see metal section, page 3. Order by propeller part number, only.

PROPS FOR OBSOLETE MOTORS are not listed however, many are still available from factory or distributor stocks. For information about props for unlisted motors, write factory, giving all possible data on motor.

MICHIGAN MAKES THE WORLD'S STRONGEST CUSHION HUBS . . . ABSOLUTELY UNBREAKABLE!

MICHIGAN

CUPPED PROPELLERS FOR STOCK OUTBOARDS

Michigan propellers incorporating the cupped edge principle, amazingly successful in the fast-bottom inboard field, are now available in outboard wheels. Made of super-strong Michalloy-K bronze, these propellers produce extremely smooth operation, greatly reduce slippage and provide generally improved performance. Enthusiastic demands from owners of a limited number of cupped outboard wheels have prompted the greatly expanded line listed below.

"VERY FAST" is standard comment from owners of the new two-blade cupped wheel. Considered to be the "hottest" propeller available for stock outboard engines, the cupped two-blade is likely to give you the race. The degree of cupping is highly critical and has been determined accurately by Michigan only after extensive testing. Look for the trophy cup mark, stamped only on genuine Michigan cupped wheels, before you buy.

In addition to above listing any other propeller in this catalog (except painted propellers) can be furnished with Racing Jet features on special order. Specify "Racing Jet Style" along with part number (includes modified blade shape and cupping) at \$8.50 net extra. Cupping only—at \$4.50 net extra.

MICHIGAN

NEW "FEATHERWEIGHT" BRONZE PROPELLERS

Michigan presents a new line of Featherweight bronze outboard propellers, for those who prefer a lighter wheel and want the advantages of bronze construction. The new design, with smaller hub plus modified blade shape, makes the wheel pounds lighter. The new Featherweight propellers offer "top" performance, greatest strength and easy repairability. Each wheel has Michigan's standard, high strength rubber-cushioned hub and carries the lifetime guarantee against blade breakage at the hub. Currently available props, including models for Johnson, Evinrude, Gale, Scott, Homelite and West Bend, are listed below.

BRONZE FEATHERWEIGHT PROPS

■ Prop-rider High Speed Propeller—Does Not Cavitate With Higher Transom.

MICHIGAN CUSHION HUBS STAND UP UNDER HARDEST USE WITHOUT BREAKAGE!

FOR SPEED, POWER, SMOOTH HANDLING
AND EASY REPAIRABILITY,
NOTHING BEATS

MICHIGAN

STRAIGHT-LINE DESIGN PROPS
FOR MERCURY

- **STRAIGHT-LINE HUB DESIGN** . . . one-piece construction with perfectly smooth contour . . . no drag . . . no extra water resistance . . . the most efficient design for greatest speed with "through the hub exhaust."
- **COMPLETE RANGE** . . . for all sizes, all models . . . any set of boat, load and use conditions. Revolutionary "cupped" designs for extra speed. Choice of Bronze, polished Aluminum or painted Economy models.
- **MACHINED-PITCH ACCURACY** . . . assures that every critical dimension of every Michigan wheel is "on the nose" . . . for reliable performance every time. Every design is exhaustively tested for performance at correct RPM . . . to assure long motor life.
- **EASY REPAIRABILITY** . . . Minor damage that may occur can be repaired quickly and at low cost. Nicks or dents need not permanently reduce performance, or cause engine damage.
- **LOW PRICES** . . . Michigan props are realistically priced to give you greater value . . . actual cash savings.

michigan's Propeller selector and price list

WIZARD (Western Auto Co.) SEE MERCURY, SCOTT, OLIVER LISTINGS

Prop-ri-der High Speed Propeller—Does Not Cavitate With Higher Transom.

WHAT'S A VACATION OR FISHING TRIP WITHOUT THE USE OF YOUR MOTOR — CARRY A SPARE!

**No. 519
ADJUSTABLE MOTOR BRACKET**

Fits 1960-64 Johnson and Evinrude 60 H.P. -75 H.P. -90 H.P. Raises motor to reduce lower unit drag. Allows motor to be set at correct height by use of shims. Mounts in original bolt holes for travel of over 2½" **\$16.50**

**No. 525 and No. 526
MOTOR BRACKET**

Permanent mount for auxiliary or trolling motors. Hard maple, natural finish with sand cast aluminum brackets.

No. 525, 8½" Mounting board for motors maximum 10 H.P. **\$12.00**

No. 526, 11" Mounting board for motors 12 thru 18 H.P. **\$14.00**

No. 607 FLYWHEEL PULLER

This simple device ends all fuss and bother in removing flywheels. Fits all motors **\$6.00**

RAISED POSITION: MOTOR STORED WITHOUT CREATING "DRAG"

OPERATING POSITION: MOTOR QUICKLY LOWERED TO CORRECT HEIGHT FOR FULL POWER

REMOVAL: BRACKET CAN REMAIN ATTACHED TO MOTOR. ONLY RAILS ARE PERMANENTLY ATTACHED TO BOAT.

**No. 516
SLIDING MOTOR BRACKET**

For trolling or auxiliary motors through 10 H.P. on hi-transom boats. Carried in top position, run in lower position. Standard rails 18" long, 11" wide bracket.

No. 516 — 18" long rails **\$24.00**

No. 516A — 24" long rails **\$28.00**

COMPETITION RACING PROPELLERS

"C" MERCURY

"C" KONIG

"A" MERCURY

Changing racing conditions such as course length, condition of water, altitudes, etc., may call for variations from the above sizes and these can be supplied at no increase in cost. These suggested sizes are based on the minimum legal weights for each class and for sea level or near sea level operation.

Deliveries normally can be made from stock immediately. All propellers are supplied in special high tensile racing bronze alloy and stainless steel, blades thinned for best racing performance and all incorporate the new cupped blade feature.

STOCK RACING ENGINES

Propellers listed at the right are for racing engines with a suggested diameter and pitch. Because these are not similar to anything previously available on the market these should not be ordered size for size to replace another type or another make. There is a best basic size in each class to meet most conditions, and we offer this listing as a guide and to simplify propeller selection.

REPAIR SERVICE

Most damaged outboard props can be perfectly reconditioned, eliminating the risk of costly engine damage through use of a bent or out-of-balance propeller. Repairs should be entrusted only to the factory or one of our authorized service stations. This is particularly important in cushion type props used on gear-shift engines. Propellers can be completely ruined through attempted repairs by insufficiently equipped and experienced shops.
